Team Details

- a. Team name: UNO REVERSE
- b. Team leader name: Jeet Nakrani
- c. Problem statement: Let AI speak to your money

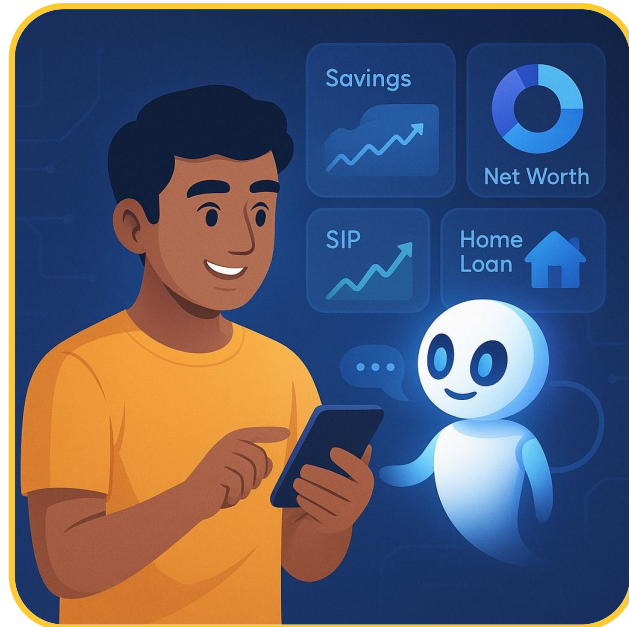

* Brief about the idea

WealthWise is a personal AI agent using the **Fi MCP** to aggregate everything about a user's financial footprint, enabling a **conversational analysis**, a **simulated financial future**, and **efficient planning**.

It listens to your questions, **text or voice**, and then generates **context-based, actionable insights** using Gemini memory and Firebase context.

Example Inquiries:

- "Will I have ₹2Cr in savings by age 40?"
- "Am I able to get a ₹50L home loan next year?"
- "What caused my net worth to drop in March?"

* Differentiating from Existing Solutions

Today's financial assistants, generally available, deliver static guidance, template-driven budget, or app-based specific insights.

WealthWise is different; it's a first of its kind **real-time multi-source MCP** (Fi's infra) that thinks like a **personal CFO** not a rigid chatbot.

Not tied to any one app - it fully understands data across 18+ institutions

Not rule-based - it reasons, simulates and adapts using Gemini

Not generic - every answer or (advice) is your-data driven

* Technologies to be used in the solution

Fi's MCP and **Google's AI stack** transforms fragmented data into organized intelligence:

Users can ask real financial questions in natural,

AI reasons over the entire financial footprint

It provides insights to act upon, scenario modelling, and action plans in real-time

From "Can I afford this?" to "What's hurting my SIP growth?", it knows your finances more than you do.

* USP of the Proposed Solution

An **AI-native financial strategist** like no other:

Learns about your life in addition to market averages.

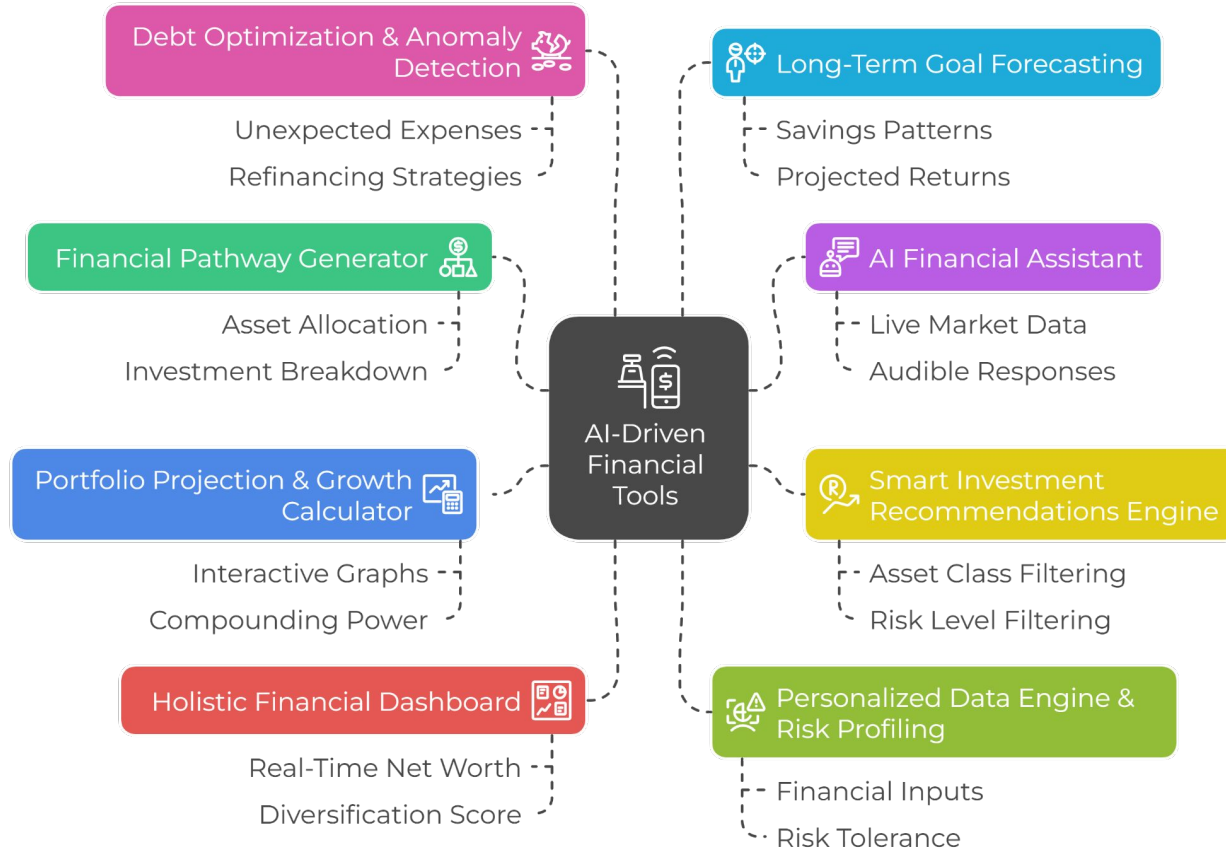

Protects your privacy while allowing you total control.

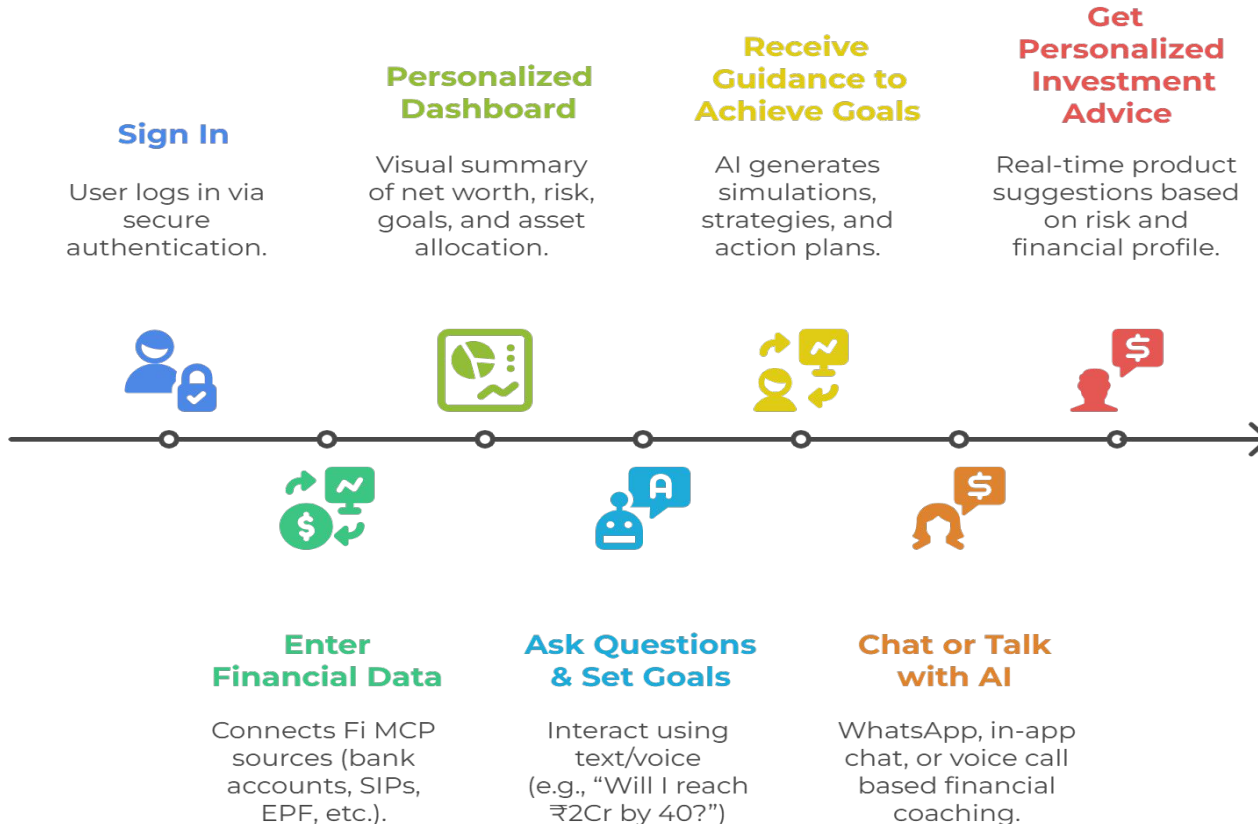

Evolves with every interaction and does more than respond.

It's not automation, it's financial augmentation.

* List of features offered by the solution

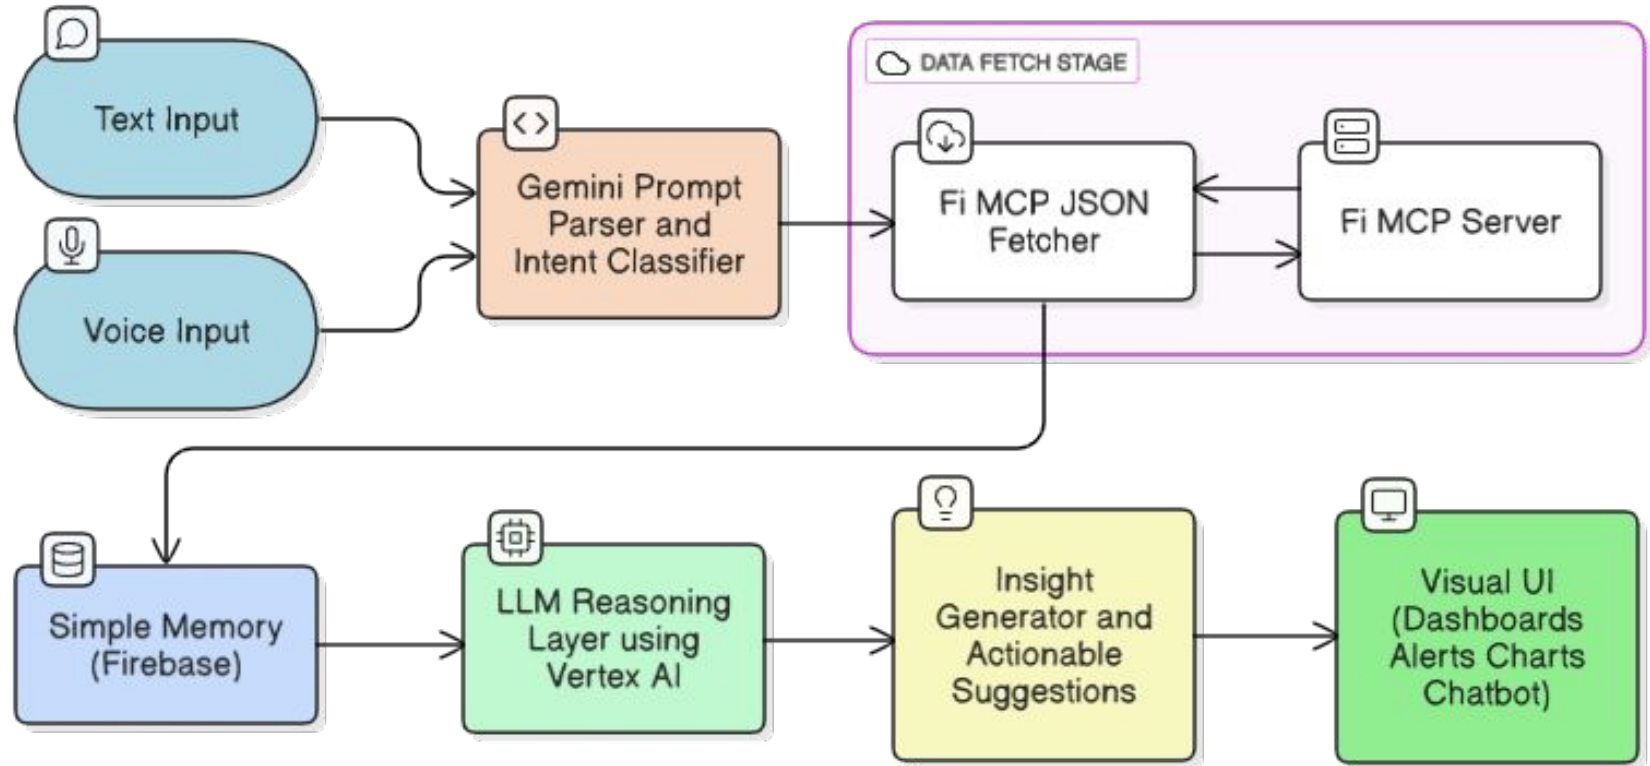

* Process flow diagram or use-case diagram

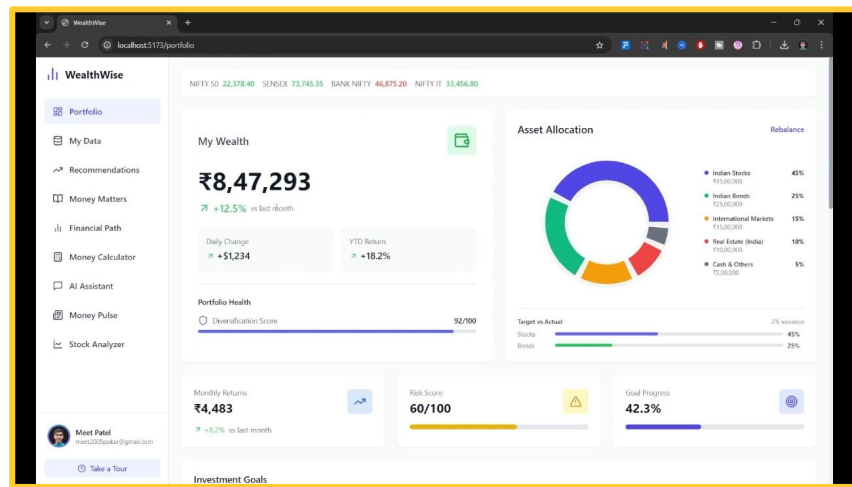

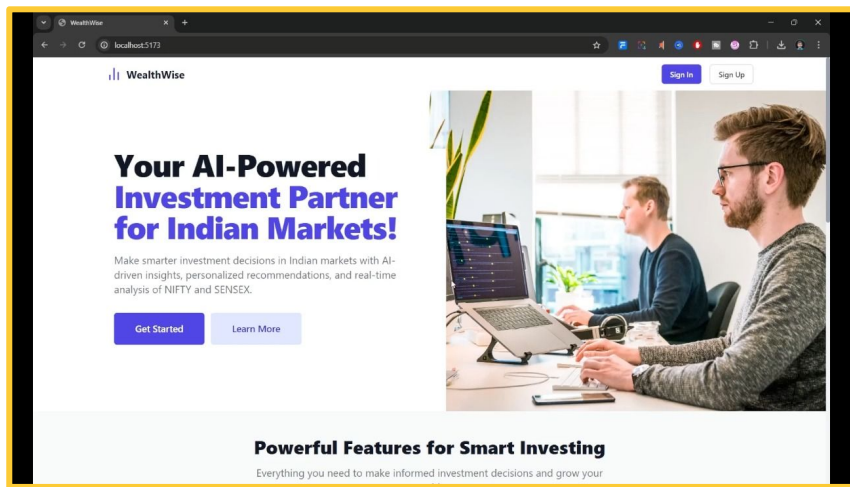

* Technologies to be used in the solution

* Architecture diagram of the proposed solution

* Prototype of our solution
